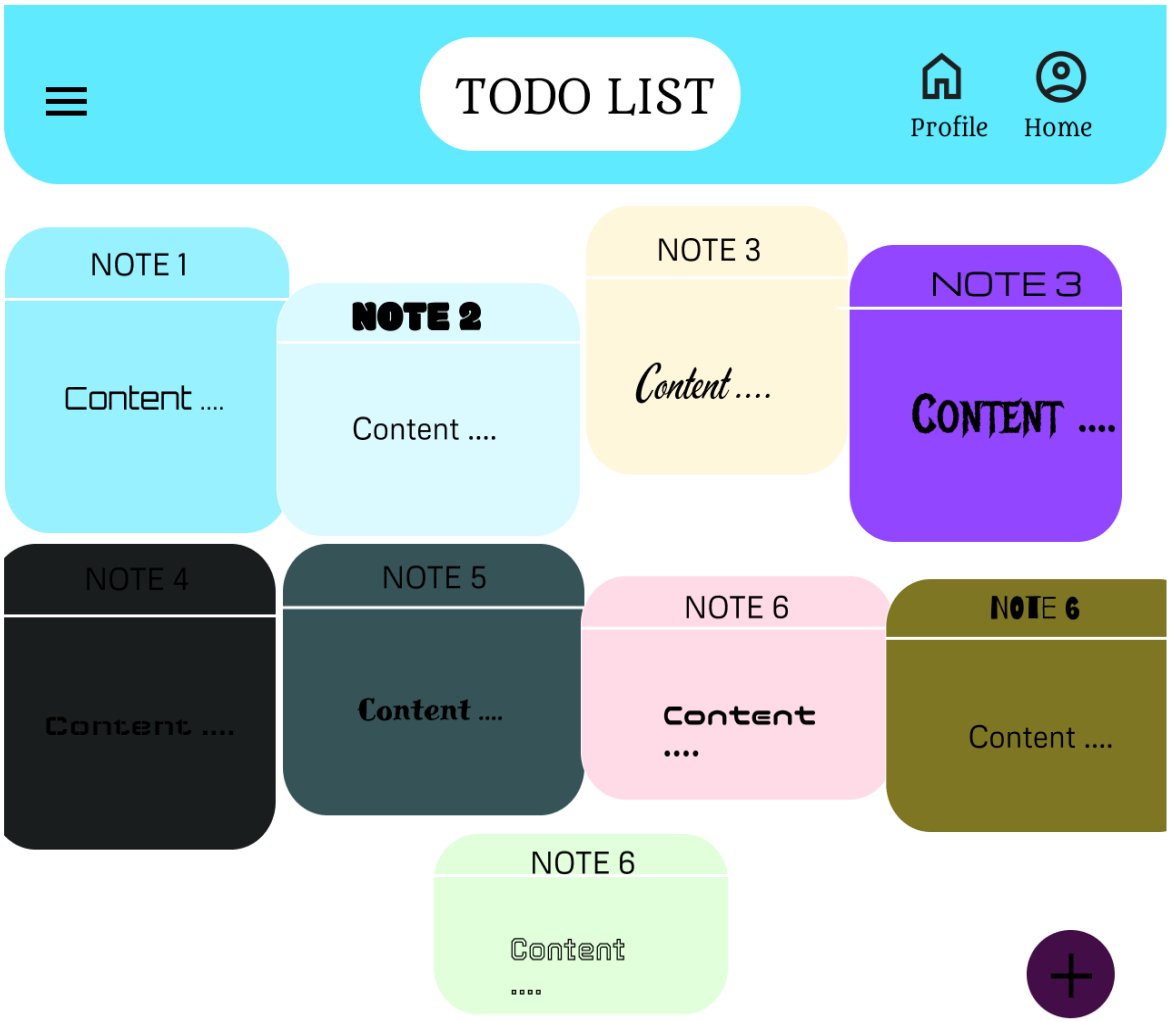
EXPERIMENT 1

ROLL NO: 240701020

NAME: ADITYA S

USER INTERFACE DESIGN

BAD DESIGN:



GOOD DESIGN:

Bad Design – Key Problems

1. **No visual consistency**
    - Different colours, fonts, and text styles for each note.
    - Looks messy and unprofessional.

2. **Poor alignment & spacing**
    - Cards are not properly aligned.
    - Uneven gaps confuse the user's eyes.

3. **Too many colours**
    - Excessive colour usage distracts from content.
    - No clear hierarchy or priority.

4. **Typography issues**
    - Mixed fonts (bold, cursive, stylised) reduce readability.
    - Not accessible for all users.

5. **Weak user experience (UX)**
    - Hard to read.
    - User must "think" more → bad UX.

6. **No design system**
    - Feels random, not scalable for real apps.
    - Hard to maintain if features increase.

Good Design – Key Strengths

1. **Strong consistency**
    - Same colour, shape, and style across all cards.
    - Looks clean and professional.

2. **Proper grid layout**
    - Clear rows and columns.
    - Easy to scan and understand instantly.

3. **Minimal & focused colour usage**
    - One primary colour = calm and modern.
    - Content gets priority over decoration.

4. **Readable typography**
    - Single font style.
    - Clear contrast between title and content.

5. **Better UX**
    - User understands the app in seconds.
    - Less cognitive load.

6. **Scalable design**
    - Easy to add more notes/features.
    - Follows real-world app standards.
