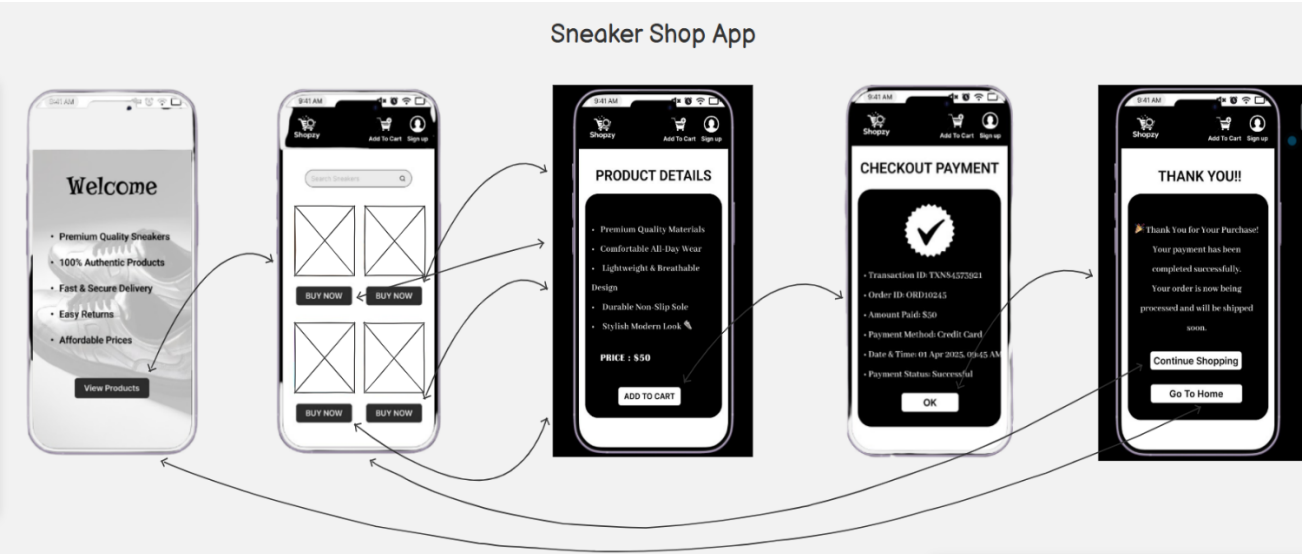
USER INTERFACE DESIGN

Introduction & User Flow

Introduction



The Sneaker Shop App is a mobile e-commerce application designed to help users browse and purchase sneakers and efficiently. The application focuses on providing a simple interface, authentic products, and a smooth buying experience.

This storyboard is created using Balsamiq to represent the **user flow** in a low-fidelity wireframe format.

Storyboard:

Objective

- To understand user interaction in an application
- To design a clear and structured user flow
- To represent application flow using wireframes
- To visualize the complete purchase process

User Flow Overview

The application flow consists of the following screens:

1. Welcome Screen
2. Product Listing
3. Product Details
4. Checkout Payment
5. Order Confirmation

Flow Explanation & Conclusion

Flow Explanation

Welcome Screen

Introduces the app and provides a “View Products” option to start browsing.

Product Listing

Displays available sneakers with search and “Buy Now” options.

Product Details

Shows product information, features, and price with an “Add to Cart” option.

Checkout Payment

Displays payment details and confirms the transaction.

Order Confirmation

Shows successful purchase message and options to continue shopping.

Conclusion

The storyboard clearly represents the complete user journey from product selection to order completion. Using Balsamiq helps in understanding the application flow without focusing on complex design.
